.....
Kaplan Student Number:
Your email address:

ACCA – Paper P4 Advanced Financial Management June 2015 Final Assessment

Instructions

- Please complete your personal details above.
- All scripts should ideally be submitted to your Kaplan centre for marking via email to help speed up the marking process. Please scan this form and your answer script in a single PDF and email it to your Kaplan centre.
- Alternatively you may post your script to us. If so, please use the correct Royal Mail tariff (large letter).
- Classroom students may submit scripts to their local centre in person.
You will be provided with the dated receipt below which you should retain as proof of submission.

Note: If you are a sponsored student, your result will form part of the report to your employer.

Marking Report

Notice to Markers

- 1 When commenting about the script performance, please ensure on individual questions and on overall assessment your comments cover areas of examination technique including:

• Time management	• Handwriting	• Presentation and layout	• Use of English
• Points clearly and concisely made	• Relevance of answers to question	• Coverage and depth of answer	• Accuracy of calculations
• Calculations cross-referenced to workings	• All parts of the requirement attempted	• Length of answers equates to marks available	• Read the question carefully

- 2 For each question, please provide suitable constructive comments

SECTION A

ANSWER THIS QUESTION

- 1 (a) NTC plc is a UK multinational with subsidiaries in Spain, Hong Kong and the USA. Transactions between companies within the group have historically been in all of the currencies of the countries where the companies are located and have not been centrally co-ordinated, with the currency of the transaction varying in each deal. Transactions due in approximately three months' time are shown below. All receipts and payments are in thousand units of the specified currencies.

Assume that it is now mid-June.

Receipts (read across)	Payments (read down)			
	UK	Spain	Hong Kong	USA
UK	–	€210	HK\$720	US\$110
Spain	£100	–	€80	–
Hong Kong	HK\$400	–	–	–
USA	US\$430	€120	HK\$300	–

Exchange rates:	US\$/£	Euro/£	HK\$/£
Spot	1.4358 – 1.4366	1.6275 – 1.6292	11.1987 – 11.2050
3 months forward	1.4285 – 1.4300	1.6146 – 1.6166	11.1567 – 11.1602

Note:

The Hong Kong dollar is pegged against the US dollar.

Interest rates available to NTC and its subsidiaries (annual %):

	Borrowing	Investing
UK	6.9	6.0
Spain	5.3	4.5
Hong Kong	n.a.	6.1
USA	6.2	5.4

Currency options

Philadelphia stock exchange £/\$ options, £31,250 contracts. Premium is in cents per £.

Exercise price	Calls			Puts		
	July	August	September	July	August	September
1.42	1.42	2.12	2.67	0.68	1.42	2.15
1.43	0.88	1.60	1.79	1.14	1.92	3.12
1.44	0.51	1.19	1.42	1.77	2.51	4.35

Option premiums are payable upfront. Contracts may be assumed to expire at the end of the relevant month.

Required:

(i) The parent company is proposing that inter-company payments should be settled in sterling via multilateral netting. Demonstrate how this policy would reduce the number of transactions. (Foreign exchange spot mid-rates may be used for this purpose.) (9 marks)

(ii) If payments were to continue to be made in various currencies, illustrate three methods by which the UK parent company might hedge its transaction exposures for the next three months. Discuss, showing relevant calculations, which method should be selected. Include in your discussion an evaluation of the circumstances in which currency options would be the preferred choice. (Note: NTC plc wishes to minimise the transaction costs of hedging.)

(15 marks)

(b) NTC plc has been approached by a Russian company that wishes to purchase goods from NTC plc in exchange for wheat. The Russian currency is not freely convertible.

Required:

Discuss the advantages and disadvantages of such countertrade to NTC plc.

(6 marks)

(c) C plc is based in France and its corporate treasury team is deciding what strategy to adopt towards interest rate risk management. The company's financial projections show an expected cash surplus in five month's time of (€ = Euro) €4 million, which will last for a period of approximately six months. EURIBOR (which is the European equivalent of LIBOR) is currently 6.5% per year and C plc can borrow at 1.5% above EURIBOR, or invest at 1.5% below EURIBOR.

The corporate treasury team does not want interest receipts during the six-month period to decrease by more than €2,500 from the amounts that would be paid at current interest rates. It is now 1 October.

LIFFE prices (1 October)

Futures

LIFFE €1,000,000 three month euro interest rate (points of 100%)

December	93.35
March	93.20
June	92.85

Options

LIFFE €1,000,000 short euro options (points of 100%)

Exercise price	Calls			Puts		
	December	March	June	December	March	June
92.50	0.35	0.90	1.06	–	–	0.08
93.00	0.18	0.54	0.78	–	0.22	0.39
93.50	0.12	0.24	0.45	0.20	0.62	0.93
94.00	–	–	0.15	0.38	1.33	1.68

Required:

Illustrate the results of futures and options hedges if, by 1 March:

- interest rates fall by 1% – futures prices move by 0.85%
- interest rates rise by 2% – futures prices move by 1.9%.

Explain how C plc should hedge its interest rate exposure. All relevant calculations must be shown. Taxation, transactions costs and margin requirements may be ignored. State clearly any assumptions that you make. (20 marks)

(Total: 50 marks)

SECTION B

ANSWER TWO QUESTIONS ONLY

- 2 Larkin Motors plc (“LM”) is a long-established listed company. Its main business is the retailing of new and used motor cars and the provision of after-sales service. It has sales outlets in most of the major towns and cities in the UK. It also owns a substantial amount of land and property that it has acquired over the years, much of which it rents or leases on medium-long term agreements. Approximately 80% of its non-current asset value is land and buildings.

The company has grown organically for the last few years but is now considering expanding by acquisition. The Chief Executive is not in favour of hostile bids as he believes the bidder always pays too much to acquire the target. Any acquisition that LM makes will therefore need to be an agreed bid.

Brass Vehicles Limited (“BV”) owns a number of car showrooms in wealthy, semi-rural locations in the North of England. All of these showrooms operate the franchise of a well-known major motor company. BV is a long-established private company with the majority of shares owned by the founding family, many of whom still work for the company. The major shareholders are now considering selling the business if a suitable price can be agreed. The Managing Director of BV, who is a major shareholder, has approached LM to see if it would be interested in buying BV. He has implied that holders of up to 50% of BV’s shares might be willing to accept LM shares as part of the deal.

The forecast earnings of LM for the next financial year are £35 million. According to the Managing Director of BV, his company’s earnings are expected to be £4 million for the next financial year.

Financial statistics and other information on LM and BV are shown below:

	<i>LM</i>	<i>BV</i>
Shares in issue (millions)	25	1.5
Earnings per share (pence)	112.5	153
Dividend per share (pence)	50.6	100
Share price (pence)	1,237	n/a
Net asset value attributable to equity (£m)	350	45
Debt ratio (outstanding debt as percentage of total market value of company)	20	0
Forecast growth rate percentage (constant, annualised)	4	5
Cost of equity	9%	n/a

BV does not calculate a cost of equity, but the industry average for similar companies is 10%.

Required:

Assume you are a financial manager working with LM. Advise the LM Board on the following issues in connection with a possible bid for BV:

- (a) methods of valuation that might be appropriate and a range of valuations for BV within which LM should be prepared to negotiate (12 marks)**
- (b) the financial factors relating to both companies that might affect the bid (6 marks)**
- (c) the most appropriate form of funding the bid and the likely financial effects on LM (7 marks)**

Note: A report format is NOT required for this question. (Total: 25 marks)

- 3** Emlyn Co is a company which owns and runs a large chain of bookshops located throughout the UK. Over the past three years the company has struggled to maintain its market share in the face of fierce competition from internet retailers and from large supermarket chains. Consequently, the company's share price has fallen from £4.33 three years ago, to £2.71 at the end of last week, and all three of the big credit rating agencies (Moody's, Fitch and Standard and Poor's) have downgraded Emlyn Co's rating on its corporate bonds.

Then, last weekend, an article by a respected financial analyst in The Sunday Times advised shareholders to sell their shares in Emlyn Co immediately. In 3 days of trading this week, the share price has fallen further, and now stands at £2.12.

The directors of Emlyn Co have just held an emergency board meeting. They have discussed the firm's current plight, and have decided that the firm needs to reduce risk, secure future growth, and to ultimately aim to improve shareholder wealth.

In an attempt to achieve all three of these objectives, the directors have decided to consider a new strategy of diversification, by attempting to acquire an underperforming business in a different business sector.

You are an advisor to the board of directors. You have been asked to prepare some briefing notes in advance of next week's follow-up board meeting.

Required:

- (a) Briefly discuss whether diversification through acquisition is an effective means of reducing risk and securing future growth. (6 marks)**
- (b) Explain how a takeover may lead to an increase in wealth for the bidding company's shareholders. (7 marks)**
- (c) Explain why a takeover may fail to deliver an expected increase in wealth for the bidding company's shareholders. (7 marks)**
- (d) Briefly outline the role that financial analysts play in creating an efficient stock market. (5 marks)**

(Total: 25 marks)

ACCA P4 : ADVANCED FINANCIAL MANAGEMENT

- 4** You are employed in the derivatives markets division of a leading international bank and you have responsibility for the following client portfolio:

Client A requires a call option on 4,000 ordinary shares in Lambley plc. The option is a European option and will be exercisable in 3 month's time. An exercise price of £1.50 has been requested.

The following data is available:

Current share price of Lambley's shares	£1.80
Risk free interest rate	10% pa
Standard deviation (volatility) of Lambley's shares	50% pa

Client B owns 10,000 shares in Lambley plc and, because of the current market uncertainty, wishes to construct a risk less hedge for these shares.

Client C wishes to purchase a European put option on 2,000 Lambley plc shares, exercise price £1.50 for 3 month exercise.

Client D has been studying the prices of \$/£ call options and requires you to outline the determinants of the option premiums on these instruments.

Required:

- (a) Calculate the value/premium of the call option on 4,000 shares in Lambley plc for client A. (9 marks)**
- (b) Demonstrate for client B how a delta hedge could be constructed to protect his position. (3 marks)**
- (c) Calculate the premium you would quote client C for a put option on 2,000 shares in Lambley plc. (5 marks)**
- (d) Briefly outline the determinants of the premium for a call option on sterling options. (8 marks)**

(Total: 25 marks)

MATHEMATICAL TABLES

Formulae and tables

Modigliani and Miller Proposition 2 (with tax)

$$k_e = k_e^i + (1 - T)(k_e^i - k_d) \frac{V_d}{V_e}$$

The Capital Asset Pricing Model

$$E(r_i) = R_f + \beta_i(E(r_m) - R_f)$$

The asset beta formula

$$\beta_a = \left(\frac{V_e}{(V_e + V_d(1 - T))} \beta_e \right) + \left(\frac{V_d(1 - T)}{(V_e + V_d(1 - T))} \beta_d \right)$$

The Growth Model

$$P_o = \frac{D_o(1 + g)}{(r_e - g)}$$

Gordon's growth approximation

$$g = br_e$$

The weighted average cost of capital

$$WACC = \left(\frac{V_e}{V_e + V_d} \right) k_e + \left(\frac{V_d}{V_e + V_d} \right) k_d(1 - T)$$

The Fisher formula

$$(1+i) = (1+r)(1+h)$$

Purchasing power parity and interest rate parity

$$s_1 = s_o \times \frac{(1+h_c)}{(1+h_b)} \quad f_o = s_o \times \frac{(1+i_c)}{(1+i_b)}$$

Modified internal rate of return

$$MIRR = \left(\frac{PV_R}{PV_I} \right)^{\frac{1}{n}} (1+r_e) - 1$$

The Black-Scholes option pricing model

$$c = P_a N(d_1) - P_e N(d_2) e^{-rt}$$

Where:

$$d_1 = \frac{\ln(P_a/P_e) + (r + 0.5s^2)t}{s\sqrt{t}}$$

$$d_2 = d_1 - s\sqrt{t}$$

The Put Call Parity relationship

$$p = c - P_a + P_e e^{-rt}$$

This table can be used to calculate $N(d_i)$, the cumulative normal distribution functions needed for the Black-Scholes model of option pricing. If $d_1 > 0$, add 0.5 to the relevant number above. If $d_1 < 0$, subtract the relevant number above from 0.5.
