

**CIMA INTERIM ASSESSMENT**

# **Performance Strategy**

**November 2011**

**Time allowed**

Reading and planning: 10 minutes

Writing: 1½ hours

Both questions are compulsory

This examination is worth 50 marks in total

**Formulae and tables are on pages 3 – 6**

**Do NOT open this paper until instructed by the supervisor.**

**During reading and planning time only the question paper may be annotated. You must NOT write in your answer booklet until instructed by the supervisor.**

**This question paper must not be removed from the examination hall.**

## FORMULAE AND TABLES

### Annuity

Present value of an annuity of £1 per annum, receivable or payable for n years, commencing in one year, discounted at r% per annum:

$$PV = \frac{1}{r} \left( 1 - \frac{1}{[1+r]^n} \right)$$

### Perpetuity

Present value of £1 per annum, payable or receivable in perpetuity, commencing in one year, discounted at r% per annum:

$$PV = \frac{1}{r}$$

### Growing Perpetuity

Present value of £1 per annum, receivable or payable, commencing in one year, growing in perpetuity at a constant rate of g% per annum, discounted at r% per annum:

$$PV = \frac{1}{r-g}$$

**Area under the normal curve**

This table gives the area under the normal curve between the mean and a point Z standard deviations above the mean. The corresponding area for deviations below the mean can be found by symmetry.

$Z = \frac{(x-\mu)}{\sigma}$

## **BOTH QUESTIONS ARE COMPULSORY**

### **QUESTION 1**

HAO Ltd sells a wide range of outdoor clothing apparel such as coats, anoraks, waterproof trousers and related outdoor clothing from its 112 stores located in a country in Europe. The company has been profitable however there are signs that gross margin in some stores has declined recently for no, as yet identified, reason.

Each store uses the latest electronic point of sale technology to maintain control of its stock and provides the facility for customers to use electronic means of payment such as credit and debit cards. However, about 45% of all transactions are still made by cash. Details of sales made and inventory below re-order levels are transferred to head office on a daily basis where management information reports are also prepared.

Stock is ordered centrally from HAO's Head Office, details of requirements being obtained from the daily management information provided by each store. Orders are sent to HAO's suppliers in the post, inventory arriving at each store approximately 12-14 days after the re-order level is reached.

Recent media reports have highlighted that one of the components used to waterproof garments releases toxic chemicals after prolonged exposure to sunlight. The board of HAO are investigating the claim, but are currently treating it with scepticism. The product range involved (Red brand) has generally sold well, although there has been little innovation in terms of developing the garment design in the last few years.

#### **Required:**

- (a) Identify the key risks facing HAO. (6 marks)**
- (b) Acting as a consultant to the board, assess each risk identified in (a) and recommend an appropriate strategy for the risk. (14 marks)**
- (c) Discuss the issues that need to be considered when planning an audit of systems such as those at HAO. (5 marks)**

**(Total: 25 marks)**

## QUESTION 2

KER is a European based importer / exporter of textiles and clothing. The majority of its imports originate from Asian countries, primarily India, Thailand and Singapore. KER then exports the products to wholesalers and retailers throughout Europe and North America.

The directors of KER have become increasingly concerned about the impact of recent fluctuations in exchange rates on the 'bottom line' results for the company. KER has just raised a significant invoice for a North American wholesaler to the value of US\$350,000 (receivable by KER in 4 months time) and the Treasurer has been asked to evaluate methods for hedging the exchange rate risk.

The first option that the Treasurer has identified is to take out a money market hedge to protect the future US dollar receipt. The current spot rate of exchange is €1/US\$ 1.7512 – 1.7501 . Annual money market interest rates for 4 month borrowing or lending are:

- Euro: 3.0 – 3.6 per cent
- US: 2.1 – 3.0 per cent

The second option is to utilise the forward currency markets and take out a forward contract to sell the US dollars upon receipt in 4 months. The 4 month forward exchange rates are quoted at 1.36 – 1.29c prem.

### Required:

- (a) (i) Describe how this risk may be hedged using the two methods identified by the Treasurer, and advise as to which is the most financially advantageous to KER. (7 marks)
- (ii) Discuss the factors which should be considered before deciding whether to hedge the risk using the foreign currency markets. (6 marks)
- (b) Much of KER's purchasing is from countries with no developed currency or money markets. The directors are concerned that this leaves KER very exposed to exchange rate risk on payments to suppliers.

**Recommend other ways in which the risk can be managed in these circumstances.**

*[Note: no calculations are required for this part of the question]* (6 marks)

- (c) As an alternative to formal hedging techniques it has been suggested that the Purchasing Power Parity Theory may be used to predict the exchange rate and hence time payments and receipts to take advantage of rate movements.

**Utilising the information above, and given that the long term prospects for inflation in the US and Eurozone are 3% and 6% respectively, what changes would you expect to observe in the US\$/€ exchange rate over the next 12 months ?**

*[You are required to calculate the forecast bank bid-offer spread rates].*

**Explain your results and briefly discuss the limitations of this calculation.** (6 marks)

**(Total: 25 marks)**
